

Use the following guide before installing SnapBack or ANY programs

SnapBack will guide you through the process of configuring Windows 10 for the first time. Some of these settings can't easily be changed, like username, once set.

Answer the following questions and write them down before you turn on your Computer for the first time. (you will be happy you did)

PC Name =? _____ SHORT, ONE word, with NO spaces or punctuation.

This name should be unique, easy to remember, and the name of your PC will typically be visible to others, so make sure it is identifiable, but does not use any name you don't want to make public. You don't really want your PC to advertise who you are, by calling it "John P Smith's PC".

User Name =? _____ SHORT, ONE word, with NO spaces or punctuation.

This is your LOGIN name. If possible, many users prefer to use the IDENTICAL username and password if they have more than one PC in their household, when security between family members is not a problem. This means that sharing files from one PC to another is much easier, and almost automatic.

User Password =? _____ Use MiXed cAse, numbers, and special characters, at least 8 to 12 characters long.

Pick a VERY unique password that you can actually remember, and that others in your immediate family will remember as well. We WILL be providing some good articles to help you pick a great password that is both safe, and easy to remember. (If you have a great article, tell us and we will include it here).

RESEARCH:

Your Wi-Fi Passphrase =? _____

Your Wi-Fi Access Point NAME =? _____

The first thing you will want to do is to connect to the internet. Sometimes it is easier to connect using a wired internet connection first. But certainly, you will want an easy way to connect. If your internet connection is too slow it could take many hours to complete the initial setup. Consider setting up at an alternate location with fast internet.

Your Email address =? _____@_____

Email password =? _____

Logging In with a Microsoft Account or Local Account (It is no longer mandatory in Win 10 to login with your MS account)

Why Would You Use A Microsoft Account?

Logging in with a Microsoft account in Windows 10 allows you to synchronize a part of your settings between your devices. If you have other PC's using the same account, things like background, changing update settings, setting up the Homegroup and networking options, configuring devices and even selecting your time and language settings can be automatically setup.

Two things to consider, 1. Microsoft will know more about you and will attempt to recommend more things to buy from them, and 2. if someone hacks your email address, they could get complete control of your PC.

Why Would You Use A Local Account?

In Windows 8.1, local accounts were extremely limited and you could not access many of the operating system's new features. Windows 10 loosens these restrictions and elevates the status of local accounts to a level unseen since Windows 7. In Windows 10, the apps that come bundled with the operating system will work without a Microsoft Account.

Downside is you cannot install apps from the Windows Store when you are using a local account. However, you can log into a local account and then use a Microsoft account to sign into the Windows Store and separately into any apps you would like to use.

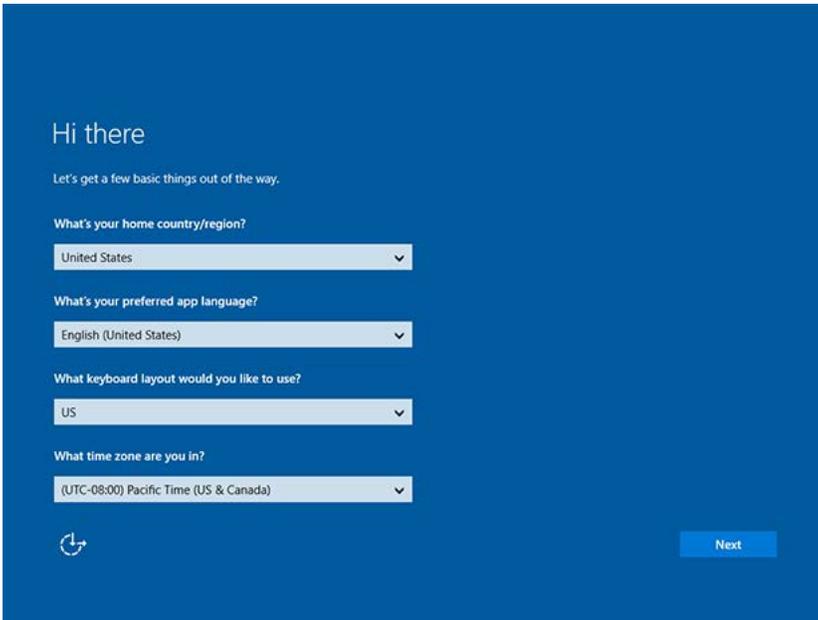

Instant Messenger User Name =? _____

Instant Messenger Password =? _____

You will need some easy way to copy key words between your existing PCs or phone. IM or email is one method. So is using a USB dongle. Do be careful of using any of these to expose passwords that might remain on the devices or in the cloud, and others could use these to take control of your system.

Turn ON your PC:

Screen 1 Basic stuff just fill it out

Hi there

Let's get a few basic things out of the way.

What's your home country/region?
United States

What's your preferred app language?
English (United States)

What keyboard layout would you like to use?
US

What time zone are you in?
(UTC-08:00) Pacific Time (US & Canada)

Next

Screen 2 License agreement - "Accept"

Here's the legal stuff

Last updated July 2016

MICROSOFT SOFTWARE LICENSE TERMS

WINDOWS OPERATING SYSTEM

IF YOU LIVE IN (OR IF YOUR PRINCIPAL PLACE OF BUSINESS IS IN) THE UNITED STATES, PLEASE READ THE BINDING ARBITRATION CLAUSE AND CLASS ACTION WAIVER IN SECTION 10. IT AFFECTS HOW DISPUTES ARE RESOLVED.

Thank you for choosing Microsoft!

Depending on how you obtained the Windows software, this is a license agreement between (i) you and the device manufacturer or software installer that distributes the software with your device; or (ii) you and Microsoft Corporation (or, based on where you live or if a business where your principal place of business is located, one of its affiliates) if you acquired the software from a retailer. Microsoft is the device manufacturer for devices produced by Microsoft or one of its affiliates, and Microsoft is the retailer if you acquired the software directly from Microsoft.

This agreement describes your rights and the conditions upon which you may use the Windows software. You should review the entire agreement, including any supplemental license terms that accompany the software and any linked terms, because all of the terms are important and together create this agreement that applies to you. You can review linked terms by pasting the (aka.ms/) link into a browser window.

By accepting this agreement or using the software, you agree to all of these terms, and consent to the transmission of certain information during activation and during your use of the software as per the privacy statement described in Section 3. If you do not accept and comply with these terms, you may not use the software or its features. You may contact the device manufacturer or installer, or your retailer if you purchased the software directly, to determine its return policy and return the software or device for a refund or credit under that policy. You must comply with that policy, which might require you to return the software with the entire device on which the software is installed for a refund or credit, if any.

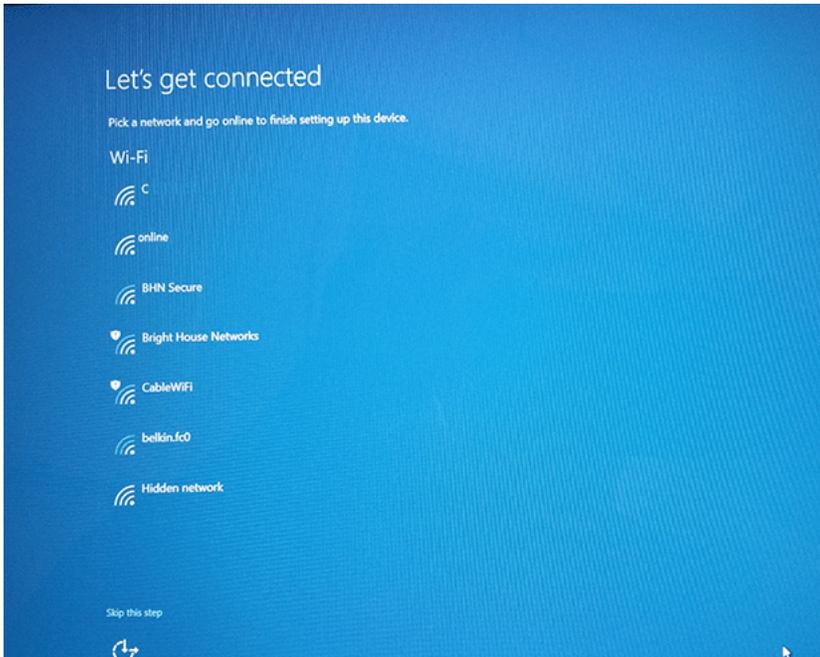

1. Overview.

a. **Applicability.** This agreement applies to the Windows software that is preinstalled on your device, or acquired from a retailer and installed by you, the media on which you received the software (if any), any fonts, icons, images or sound files included with the software, and also any Microsoft updates, upgrades, supplements or services for the software, unless other terms come with them. It also applies to Windows apps developed by Microsoft that provide functionality such as mail, contacts, music, and

Accept

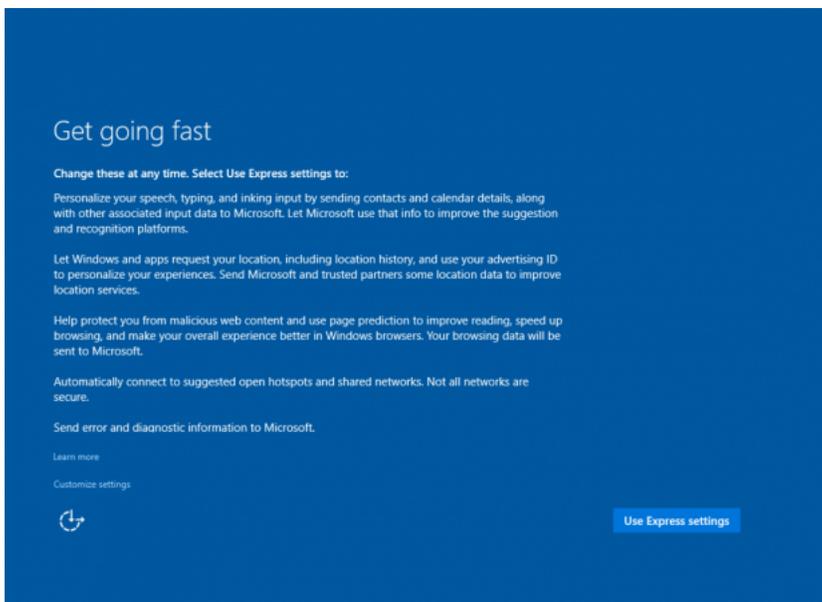

Screen 3 Let Get Connected (WIFI)

*Make sure you have your WIFI Network Security Key/
Password and Router Name*

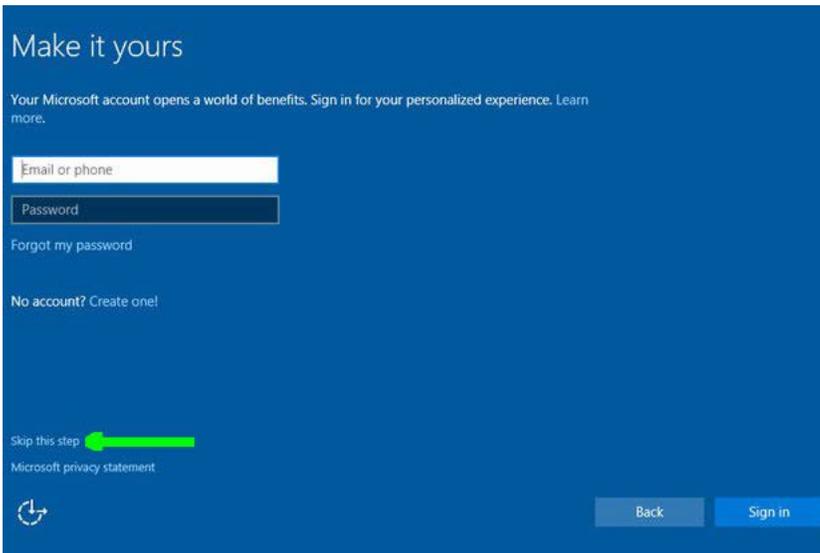

Screen 4 Get Going Fast (Express or Custom?)

*Over 400 choices in Custom - SnapBack will handle the
important ones. Choose Express*

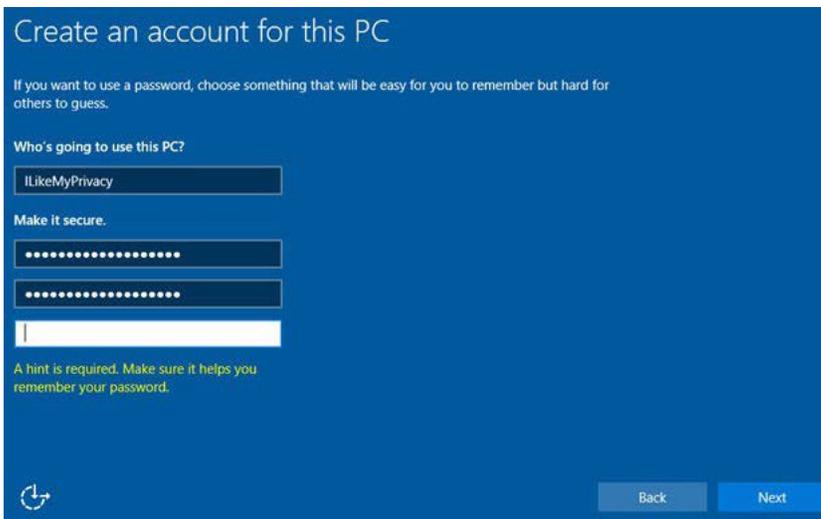

Screen 5 Make it Yours - Create PC Login: CHOOSE: Local or Microsoft Account? *Logging in with your Microsoft Account is not required*

1. Select "skip this step" takes you to screen 6 where you can create a local login.
2. (Or, you can use your Microsoft Account Login) *see notes above*

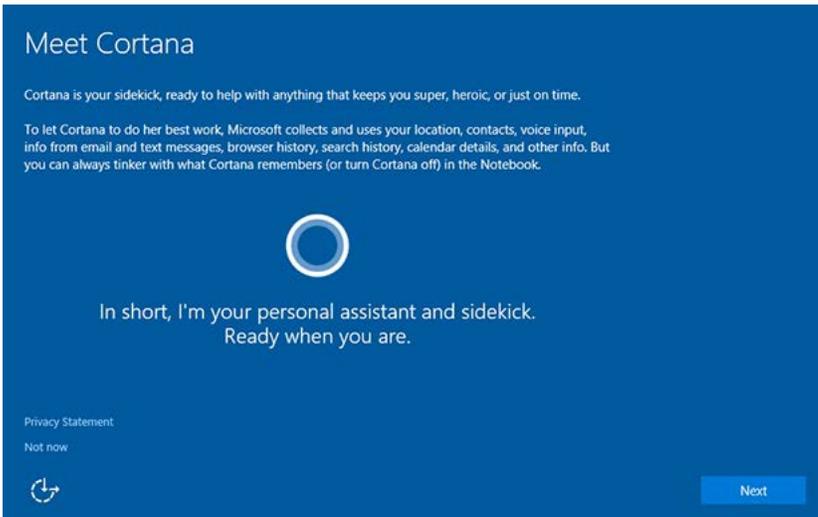

Screen 6 Create a Local Account

1. DO NOT use the name of the user, (Who is going to use this PC?), instead, use the same login name as other PC's you regularly log into.
2. Set password and Hint

Screen 7 Meet Cortana

Cortana is a SIRI like assistant, and actually learns as you use it. Hit "next" to enable or "not now".

Your PC will now go through the setup process, which could take a bit.

When the system returns a desktop, go to <http://snapback-apps.com/mypcsetup/main.html> to have SnapBack customize important windows settings and install all your favorite programs.

Note: SnapBack will be downloaded (7MB) and installed on your computer.

SnapBack never runs from the internet, nor does it send any information back to any server.
